INTEGRIS SOFTWARE:
THE SINGLE SOURCE OF TRUTH FOR POLICY-BASED DECISION MAKING

GDPR SHINES A LIGHT ON PRIVACY DATA MANAGEMENT

IT systems are excellent at collecting, processing, and transferring data, but most are not properly equipped to ensure data is handled in a compliant way under the scrutiny of strict regulatory or contractual mandates. Existing systems weren't built to contend with ever-changing privacy requirements being continuously rolled out across the globe. And those systems and processes must be defensible.

In the wake of this shifting privacy landscape, current technology stacks are consistently found to be deficient at dealing with mandates handed down by regulations like GDPR, among many others. Without the ability to automatically identify and tag where personal data exists across disparate systems, apply policies to it, and assess risk throughout the data lifecycle, businesses are left in the dark without a clear path to remediation. Integris can help.

INTEGRIS SOFTWARE: PRIVACY INTELLIGENCE IN A REGULATED WORLD

Integris allows you to turn your business obligations, such as contracts, regulations, policies, and customer consent, into actionable information. We use machine learning to create a live data map, giving you an automated system of record to manage your corporate risk. Integris is also the only automated system of record for GDPR compliance.

MAP

Get the complete picture of your data including where data resides and how it flows throughout the enterprise.

AUTOMATE

Enact automated policies to lower operational overhead and reduce the risk of error.

CONTROL

Ensure data is appropriately tracked, classified, and continuously in compliance.

INTEGRIS HAS THE RIGHT SOLUTION FOR YOUR LEADING ENTERPRISE

Provide audit trails for right to be forgotten requests

Create a live data map of personal information

Tie obligations to your data map to understand risk

Know what data, and whose data, is entering and leaving your organization

Respond to breaches within the 72-hour requirement

Prove processing purpose with automated reports

DATA MANAGEMENT IS COMPLEX

Businesses today are faced with numerous layers of obligations, operational contingencies, and technical considerations to stay in compliance.

OBLIGATIONS

- ☑ Regulations
- ☑ Contracts
- ☑ Policies
- ☑ Consent

TECHNOLOGY

- ☑ Structured and unstructured data
- ☑ Data in motion and at rest
- ☑ Data on premises and cloud

OPERATIONS

- ☑ Constant streaming data
- ☑ Different views of the same customer
- ☑ Different obligation dependencies

WORLD CLASS TEAM

We have a proven leadership team with experience from Microsoft, eBay, Amazon, Wal-Mart, Expedia, and more, as well as certified Information Privacy Professional Services based in the U.S.

PROVEN TECHNOLOGY

Our engineers have deep big data expertise in large enterprises, and have developed a solution that can be deployed both on premises or in the cloud via container technology. Our scalable Lambda data pipeline architecture (with Lego-like microservices) seamlessly plugs into existing IT infrastructures.

TECTONIC MARKET SHIFT

The market is changing rapidly – GDPR is just the first wave of global changes in the privacy data management space.
